Transamerica Life Bermuda

Business Transformation Plan v1.1

Aegon International

June 2024

CHALLENGES OF TRANSAMERICA LIFE BERMUDA

Global HNW market remains on double-digit growth trajectory, although product demand and customer profiles have changed in the last years. Nevertheless, TLB dropped from market-strong to marginal position. That's why it is necessary to reinvent TLB, strengthening commercial focus, broadening target market and modernize business processes, organization and the IT backbone. With the right set of set of change initiatives, TLB can almost double value creation by 2028.

TLB leadership presented a high-level strategy for how and where we could reignite the business. And TLB is now supported as a core part of AEGON growth strategy.
This pivot requires a shift in mindset and strategy from 'Maintain and Sell' to a commitment to 'Invest and Grow'. This new strategy requires review of positioning, market development, products & services, partnerships & distribution, business processes & organization, IT-landscape and people & culture. In this document the growth strategy is translated to a feasible and clear change roadmap.

OBJECTIVE AND RESULTS OF THE BTP

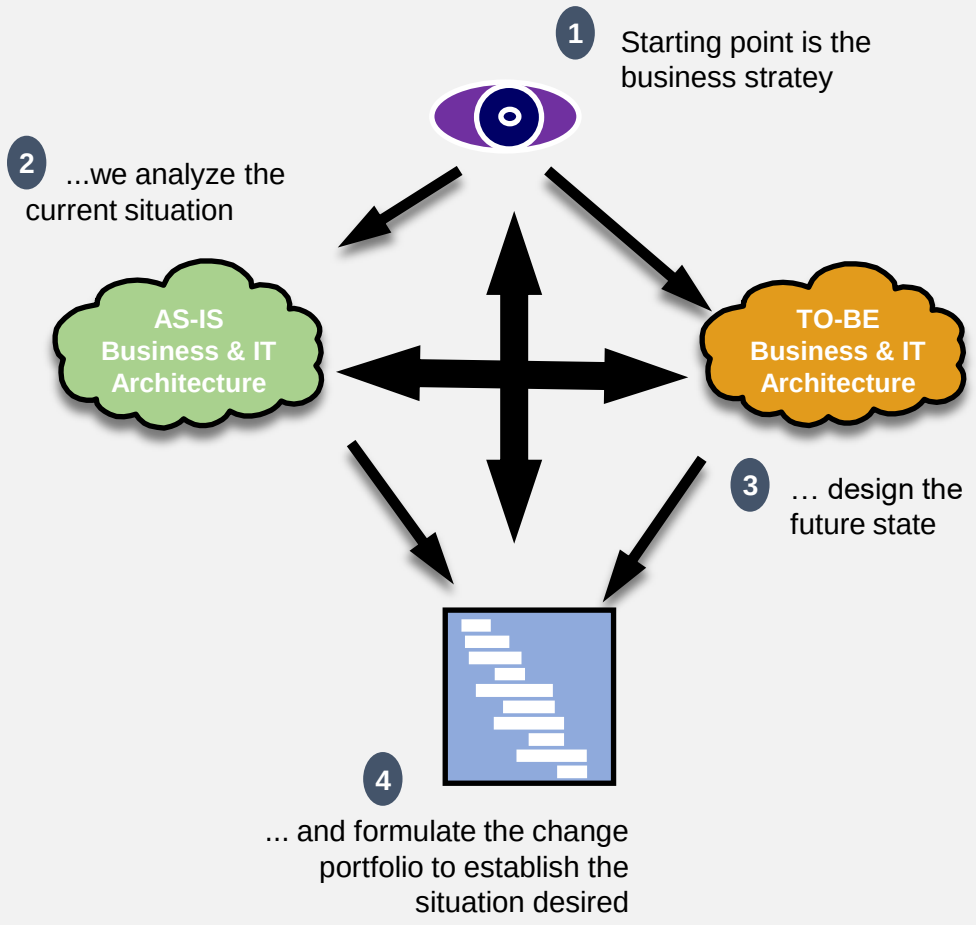
Objective: support TLB in achieving growth ambitions

- **Integrate all initiatives** related to business transformation into one clear and understandable story, with a common language
- Get **higher pace in change** and increasing agility
- **Alignment** between business and IT
- Create a future proof **business & IT architecture**: flexible, open, scalable, data-centric
- Derive a coherent and feasible **change portfolio** and input for an associated investment plan, aimed at realizing the growth strategy

What results are delivered?

1. Recap / sharpening of the **business strategy** (as currently developed with the BD initiative)
2. Translation into **guiding principles** of customers, services, channels, processes, organization, people, data, applications and technology.
3. Outline design of the **to-be situation**: charcoal sketches of customers, services, channels, processes, organization, people, data, applications and technology.
4. Plot of all **desired change initiatives:** bottlenecks, needs, opportunities and ongoing changes.
5. Clustering of change initiatives to buckets, priorities, change approach, transformation organization & first step towards **change roadmap and investment plan.**

Approach in a nutshell

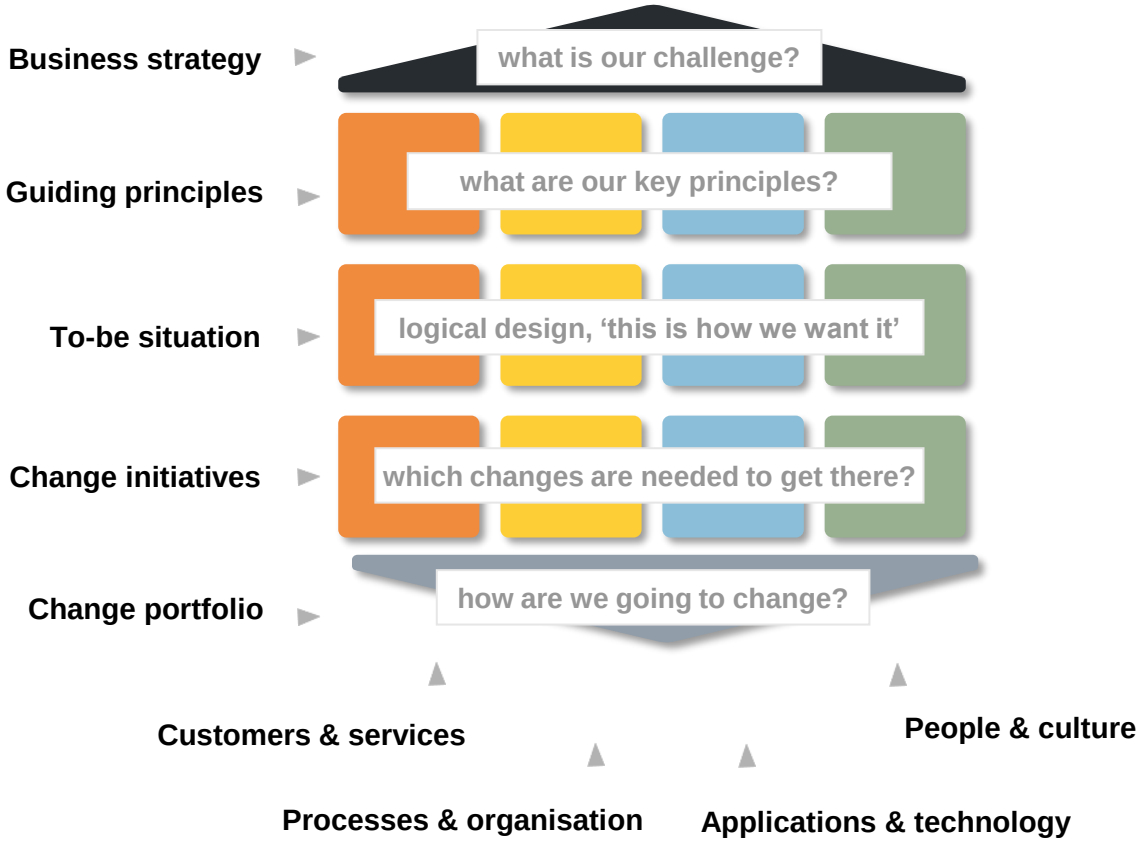


WE MAKE USE OF THE BTP FRAMEWORK

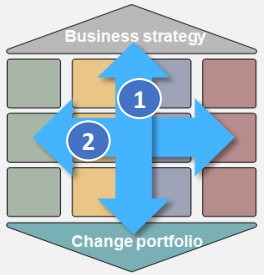
Approach

The framework has been successfully applied within Aegon, for example in the Netherlands, Spain and MAG.

- The **business strategy** is translated into a coherent set of principles for the Business & IT Architecture.
- Desired change initiatives for the coming years are formulated based on 'charcoal sketches' of the desired situation and a **fit/gap analysis** with the current situation (new opportunities, bottlenecks, ongoing developments).
- The desired change initiatives are **clustered into buckets** in which we must invest in the coming years.



Added value



- **Aligns strategy and change** 1
  Are we doing the right things? Are we focusing enough? And are we optimizing our change resources (money, capacity, expertise) on our ambitions? Ensures that (new) investments are aimed at adding value. Facilitates decision-making on the required resources ($, capacity).
- **Aligns all elements of business and IT** 2
  Customers, propositions, channels, processes, organization, people, data, applications and technology.
- Helps **communication** to all involved. Provides overview, structure, clarity and transparency to all stakeholders about the desired situation and how to get there. Understanding complexity makes complexity more manageable.

People & culture

*We make an adjustment to the standard BTP framework. Normally, the fourth column is about the IT infrastructure. Because this has been outsourced to GTS, this is now less relevant. Given the importance of **People & Culture**, the 4th column is used for this.*

STARTING POINTS OF THE APPROACH

1. Fixed lead time: **timeboxing.** We do not strive for completeness, Allow white spots (but name them). The main results are ready end of April 2024.

2. In **scope** are all entities of TLB incl. relationships with other Aegon organizations and with third parties.

3. Planning horizon for the roadmap is **2-3 years (2026),** including consequences for short-term choices.

4. Working **top-down, iterative, from rough to fine.** But we'll stick to outlines, no details. 80/20 rule, **focus on essentials**.

5. No long-term blueprint but direction that can be **continuously aligned** based on the latest experiences and insights.

6. Maximum **reuse of existing material** and fitting it into the structure of the framework. We're not going to redo anything that's already there (and good enough).

7. It is not only about the content but also about the process; striving for **involvement** to achieve supported results. Keeping in mind that we have an existing business that must be serviced concurrently during the transformation.

GOLDEN CIRCLES

HISTORY

Transamerica Life Bermuda Ltd. has offices in Bermuda, Hong Kong and Singapore. Technically it is a subsidiary of TLIC (majority shareholder). From a BU reporting perspective, it is part of Aegon International. The company offers an array of innovative insurance solutions which are designed especially for High-Net-Worth customers for wealth protection and legacy planning. Recognizing customers' needs for sound financial security, TLB aims to deliver exceptional service and powerful solutions that protect and perform at the highest possible level.

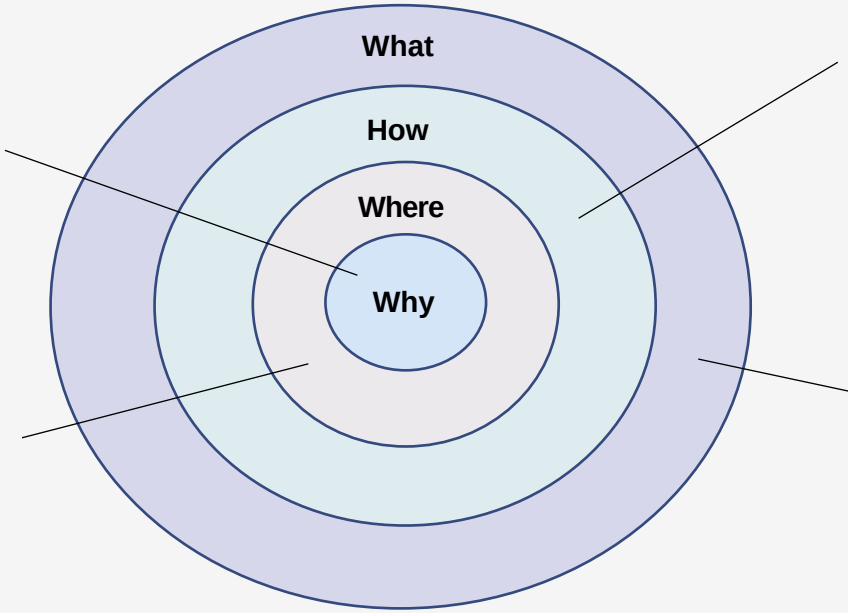
OUR GOLDEN CIRCLES

Our purpose

Safeguarding generations of wealth (helps people live their best life)

Our vision

To be the best HNW 'Global' insurer, excelling in customer service



How we will achieve this

- Best in class mindset
- Living our values (tune in, step up, force for good)
- The curator of HNW solutions
- Combine heritage with innovation
- Sustainable business

Our strategic focus

- Best team, passionate people
- Best products and processes
- Best service
- 1st choice with distributors
- Quality growth

SWOT ANALYSIS - HEADLINES

STRENGTHS

1. High Net Worth Specialist, over 40 years of experience
2. Financial Strength; A+ rating from Standard & Poor's
3. Investment strategy, leveraging Aegon Asset's Management experience
4. Environmental, Social & Governance, winner of the 2021 Benchmark Wealth Management awards
5. Product Excellence: powerful High Net Worth (HNW) life insurance products that protect and perform at the highest level.
6. Underwriting expertise and claims payments
7. Partner Service including marketing support and tailored training programs

WEAKNESSES

1. Insufficient adaptation to changing market demand; stayed too long in only offering Traditional UL and fly-to-buy model
2. Capabilities are inconclusively aligned with changing market demand
3. Ability to act in an agile and dynamic way to capture and react to market dynamics
4. TLB is insufficiently shortlisted for brokers
5. Too much internal focus
6. Legacies of the past creating barriers to NB (e.g. inforce legacy block inherited from TLIC)
7. Over-governed at Group / risk averse appetite which minimizes TLBs agility

OPPORTUNITIES

1. Continued growth in global HNW market, underpinned by the growth of HNW / UHNW segments and wave of first-generation wealth transfer (notably across Asia and the Middle East)
2. Attractive profit by lucrative product margins
3. Fresh markets and channels not tapped into by TLB with less competition
4. DIFC is emerging as a major hub while Switzerland, USFN and Latam are smaller but growing/stable.

THREATS

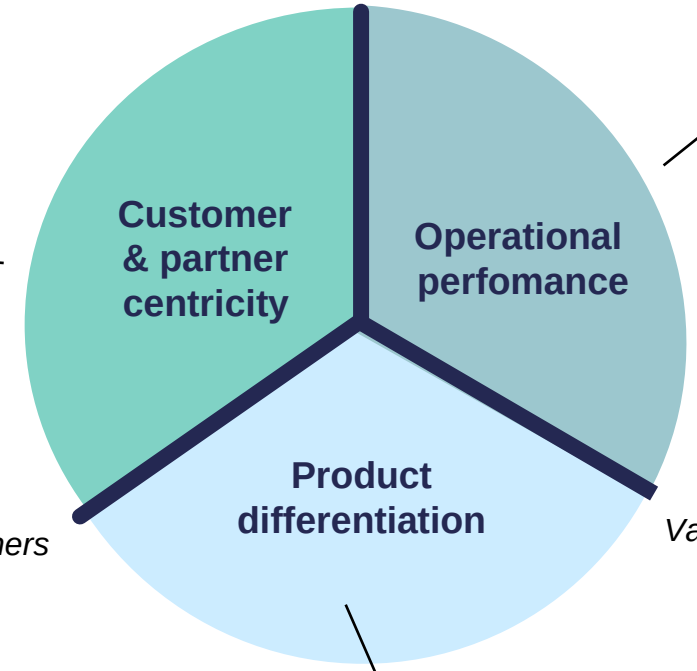
1. Changing interest rate environment with impact to long term product viability
2. Nature of product demand has shifted dramatically from UL to WOL and Savings
3. Broker and reinsurer attitudes underpin a relatively concentrated market with a clear top-2 carriers
4. Appetite to move into product lines dominating the market leading to limited propensity
5. Competitors and new entrants moving quickly to new products (e.g. WOL, Savings) and sales models (generic / master trust options)
6. Manual approach to managing on going servicing

THE STRATEGY IS A BALANCING ACT BETWEEN DIFFERENT BUSINESS DRIVERS

A

- Connect to life events and customer journeys of our target groups
- Brilliant, omnichannel customer and broker experience from start to end
- Service excellence aligned with customer and broker experience.
- Collect and use data, recognize patterns to make the best offer available.
- Increase commercial strength in all distribution channels

Business processes



Customers & partners

Value propositions

C

- Increase productivity and scale by streamlining, redesigning and digitizing of business processes
- Reduction of complexity and costs
- Increasing efficiency and operational competitiveness

B

- Innovation: invest in new, additional value propositions with distinctive character in the market
- Create new, appealing, simple, understandable and easy to process products and services
- Create speed; short time-to-market, by a lean and agile way of working

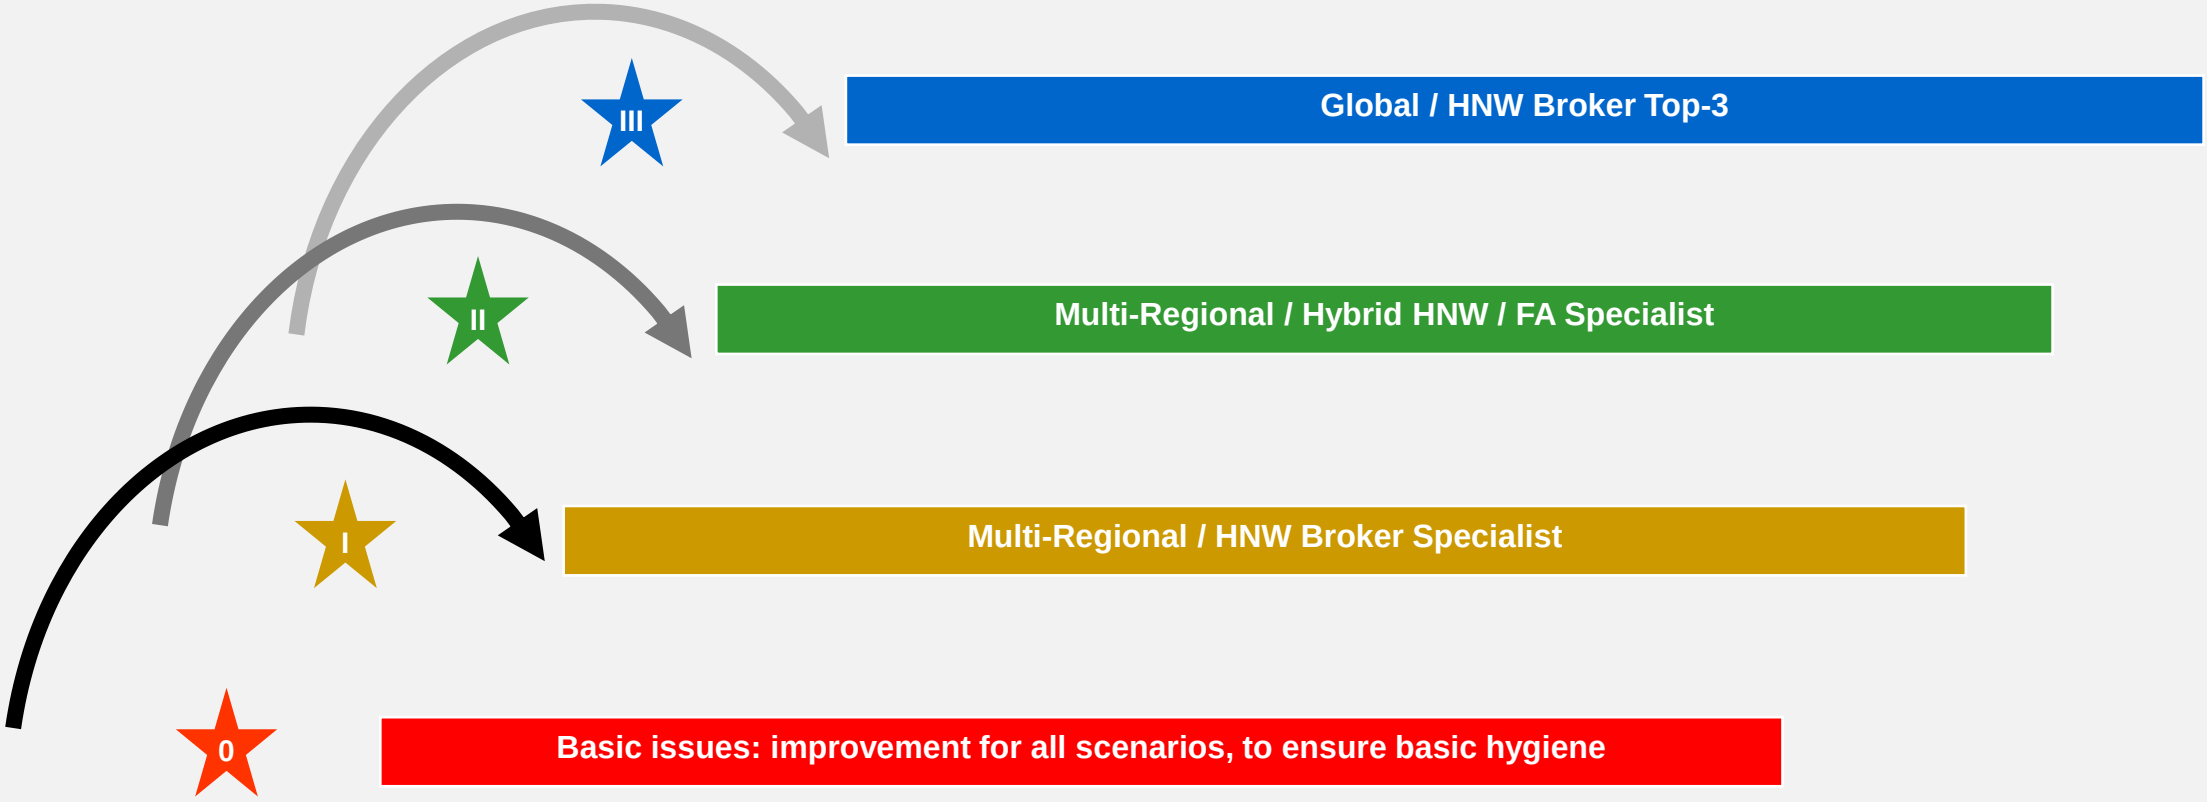
THREE GROWTH SCENARIOS ARE RECOGNIZED

(SOURCE: GROWTH STRATEGY NMG)

	Scenario I Multi-Regional / HNW Broker Specialist	Scenario II Multi-Regional / Hybrid HNW / FA Specialist	Scenario III Global / HNW Broker Top-3
Market Coverage & Positioning	• Extend global HNW broker reach (no in-market presence ex-Asia) • Tactical growth in Singapore FA but no differentiation supporting mid-term • Group partner referrals to existing brokers (Spain)	• Extend global broker reach (Asia, DIFC, Miami, Switzerland) including via DIFC hub • Ring-fenced Singapore FA model (service, pricing) • Group partner referrals incl anchoring new distributor models (Spain, master agency Brazil)	• Extend global broker reach (Asia, DIFC, Miami, Switzerland including DIFC hub • Differentiated 'streamlined' FA model (Sing, DIFC) • Group partner referrals incl anchoring new distributor models (Spain, master agency Brazil)
Product Coverage	• Current product offer: traditional UL, IUL and term (no WOL build, no savings)	• Current product offer: traditional UL, IUL and term (no WOL build, no savings)	• Expanded product offer, with competitive WOL launch in HK (assisting UL remediation) and Bermuda
Operations & Ops Model	• HK/Singapore CF build-out (10 UW, 7 NB end-FY26) • Limited Bermuda build-out (<5 FTE incl off-island)	• HK/Singapore (12 UW, 10 NB end-FY26) plus DIFC (2) • Expanded Bermuda build-out (8 FTE incl off-island)	• HK/Singapore (14 UW, 12 NB end-FY26) plus DIFC (3) • Expanded Bermuda build-out (10 FTE incl off-island)
Digital & Tech	• Tactical investment: hygiene fixes to broker portal, quote & illustration experience, internal pain points	• Tactical plus targeted strategic (basic NB workflow, quote/illustration integration & inforce management)	• Tactical plus strategic tech spend (match top-2 on case mgt/workflow and inforce functionality)
Reinsurance (*)	• Targeted enhancement to MRE arrangement	• Re-tender or re-structure (mid-term path to auto-bind at $50m+)	• Re-tender or re-structure (including Group captive or co-insurance; mid-term harmonize with top-2)

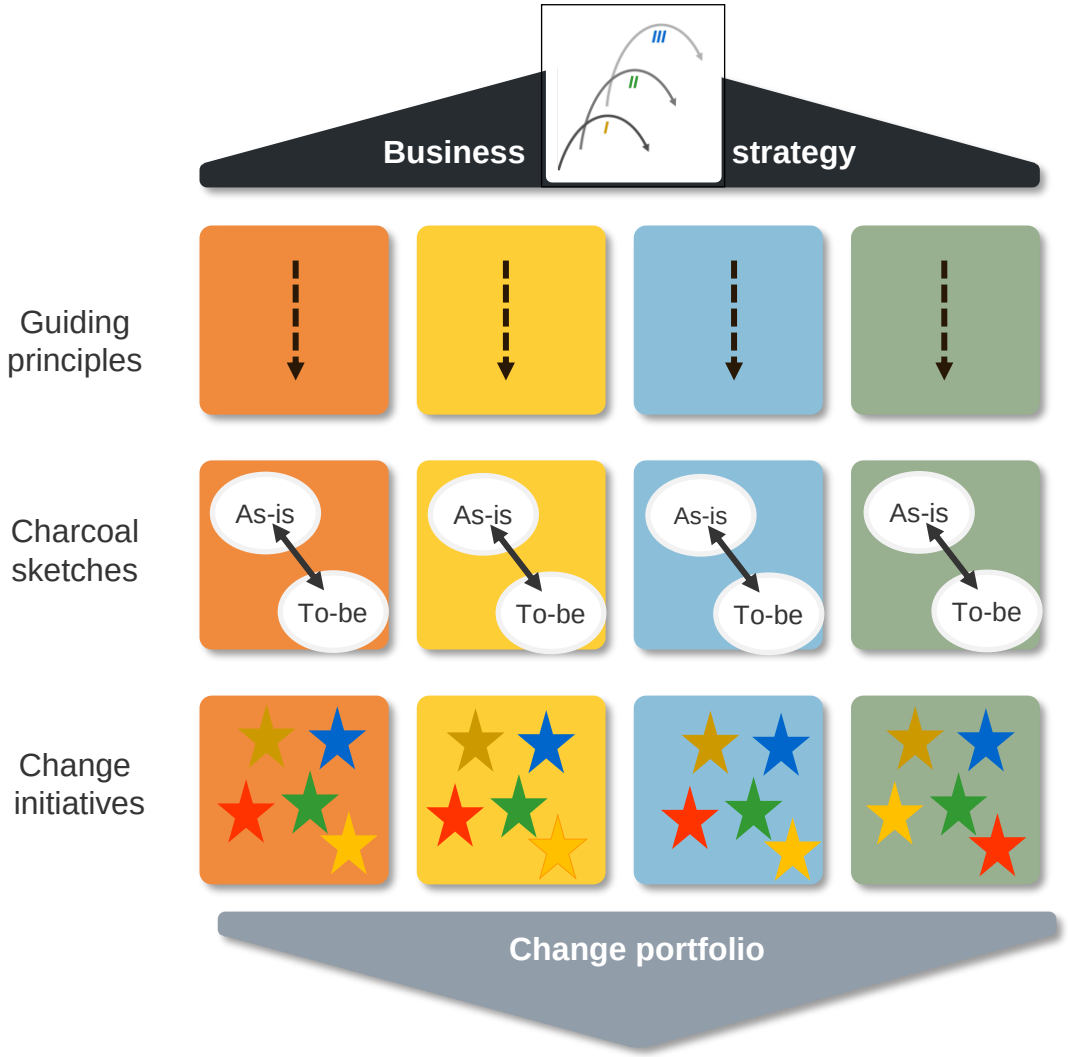
(*) Reinsurance choices are out of scope in this document

THE SCENARIOS CAN ALSO BE SEEN AS PLATEAUS



Each plateau requires specific change initiatives; in addition, basic changes are needed for all scenarios, to ensure hygiene. However, these still need to be prioritized.

CHANGE INITIATIVES ARE DERIVED FOR EACH COLUMN



- Desired change initiatives for the different BTP columns are formulated based on 'charcoal sketches' of the desired situation and a fit/gap analysis with the current situation.
- Four types of change initiatives are recognized:
  1. Initiatives to ensure hygiene; these are **'basic issues'** and (after prioritizing) preconditional for all scenarios; the associated investments in these change initiatives must therefore be included in the scenario investments
  2. Initiatives that are the result of choosing **scenario I**
  3. Initiatives that *(on top of scenario I)* are the result of choosing **scenario II**
  4. Initiatives that *(on top of scenarios I and II)* are the result of choosing **scenario III**
- In addition, there are still various uncertainties; these are referred to as **question marks**.

CUSTOMERS & SERVICES

1. Guiding principles
2. View on customers
3. View on products and services
4. View on value chain partners
5. Customer & partner engagement
6. Change initiatives

GUIDING PRINCIPLES

1. **Customer focus.** We focus on HNWI customers all over the world. Customers are treated specifically according to their (potential) value (e.g. CLV = customer lifetime value and qualitative assessment).
2. **Personalization.** HNWI customers seek customization to meet their complex needs; there is no one size fits all approach as their needs differ at different stages of their lives, may be different depending on demographics, and will vary by HNWI segment. We differentiate, based on knowledge about the customer (smart use of all relevant data / 360-customer view). Personalization can take place in product offerings, pricing and service provision in the customer journey.
3. **Product modularization.** To facilitate our HNW clients being able to choose a lot of customization in their products, we build the products as modular as possible to pursue maximum reusability and uniformity of underlying processes. As a result, the customer experiences customization, but it is built underneath with reusable components. Unbundling our products and services into small components ensures that we can reassemble them in many ways in terms of composition, pricing and risk management. Products can be offered under different labels and white label.
4. **Distribution.** We collaborate seamlessly with distribution partners (brokers and financial advisors, both internationally and locally) and offer a distinctive partner experience. Segmentation-based distribution approach, with targeted service levels aimed at those distributors with the greatest track record and propensity for new business. We make clear agreements on incentives / commissions.
5. **Convenience.** Customers (and partners) experience a superior service: positive, engaging, and empowering. We connect, in close cooperation with our distribution partners, to their life events (marriage, pregnancy, moving, retirement, health, decease, etc.) and focus on creating relevance in their customer journey. Customer journeys can be different per target group and must be adapted to the different markets. Full consistency covering all interaction channels, both physical and digital. Same request, same outcome. Same question, same answer. Same topic, same information.
6. **Be competitive by an excellent price / quality ratio.** TLBs propositions are always in the top 3 of the market. There is a sharp focus on customer needs, prices vs. yield of products, with a view to margins, commissions and room for commercial pricing.
7. **Innovation.** Development of new value propositions in co-creation with business partners. Market launch according MVP concept (minimum viable product). Time-to-market of new product launches within 6 months.

VIEW ON CUSTOMERS

HNWI-segment	Wealth (USD)	Sum assured (USD)	% of TLB policies	% of total sum assured	Key customer needs
Affluent+ - HNW 1	750K – 1M	0.5M - 1M	85%	45%	• Family protection • Loan protection • Wealth accumulation • Targeted savings goals, e.g., education funding, retirement • Estate and legacy planning • Asset structuring • Legacy planning • Business continuity • Tax planning
HNW	1M – 3M	1M – 2M	9%	17%	
HNW+	3M – 10M	2M – 5M	5%	20%	
HNW+ - UNHW	10M – 100M	5M – 10M	1%	8%	
UNHW	>100M	>10M	0,5%	10%	

Scenario II II

1. Differentiated FA model (and different pricing / service model, or even different label) for the affluent+ market

VIEW ON PRODUCTS & SERVICES

Product type	Stands for	Meaning
WOL (4)	Whole Life Insurance	Provides coverage throughout the life of the insured person. In addition to a death benefit, WOL also contains a savings component in which cash value may accumulate.
Index Savings	Index Savings	Cash or cash equivalents (e.g. as bank deposits), which are exposed to no risk of loss but also come with correspondingly minimal returns.
IUL (2)	Indexed Universal Life	A type of permanent life insurance, meaning it has a cash value component along with a death benefit. The cash value can earn interest by tracking a stock market index.
UL (5)	Universal Life	A type of permanent life insurance that, like other permanent insurance, has a cash value element and offers lifetime coverage if you pay your premiums
VUL?	Variable Universal Life	Combines lifelong insurance protection with flexible premiums and cash value you can access while alive.
PPLI? (6)	Private Placement Life Insurance	A form of cash value universal life insurance that is offered privately, rather than through a public offering.
New products & services? (3) (7)	▪ Critical illness, white label international medical? ▪ Wealth management advise, lifestyle benefits? ▪ Access to exclusive events & programs? ▪ …..	

Basic issues (0)
2. Benchmark and adjust pricing

Scenario I (I)
3. Develop a 'Masters of HNW' proposition with differentiated service and support

Scenario III (III)
4. Competitive WOL launch in HK and Bermuda
5. HK UL remediation

Question marks (?)
6. Expand into PPLI / VUL market?
7. Develop strategy new products and services (critical illness, white label international medical, …)

VIEW ON VALUE CHAIN PARTNERS

	Characteristics	HK hub	SG hub	BM hub	DIFC hub
International broker 8 9	▪ Historically the most important channel, a handful of international brokers fed by private banks ▪ Large scale and resources ▪ Generally higher ticket size and more commoditized ▪ Banks have influencer role, broker is distribution partner, the primary decision-maker				11
Regional & local brokers / FAs	▪ Are an increasingly important source of new business ▪ They value ease of doing business more and offer potentially better conversion ratios ▪ Need for value added services such as account management and training, especially in the areas that can help them grow their businesses further		12		14
Group partnerships 10 13	▪ Aegon's joint ventures in Brazil, China and Spain/Portugal, which do not have sufficient expertise / capacity to operate in the onshore HNW space but like to have a more complete proposition				
Agency / Banca? 15	▪ By acquisition of a broker or tie-up with bank in exchange for an equity stake				
Reinsurers	▪ Secondary decision maker ▪ Consider point-in-time capability as well as experience to inform selection				

Scenario I (I)
8. Broker segmentation and tiered service offer
9. Extend global broker reach, no in-market presence
10. Group partnerships via existing brokers (Spain)

Scenario II (II)
11. Extend global broker reach including via DIFC hub
12. Differentiated FA proposition Singapore
13. Group partnerships via new channel partners (eg Latam master agency/Brazil)

Scenario III (III)
14. Differentiated FA proposition DIFC

Question marks (?)
15. Explore acquisition of a broker Or tie-up with bank in exchange for an equity stake (captive model)?

EXPLANATION OF CHANGE INITIATIVES

These have not yet been prioritized!

0	Basic issues	Explanation
2	**Pricing**	Benchmark and adjust pricing for competitiveness, especially new markets.
16	**Brand and presence**	Improve brand and presence: “revive”/”reset” damaged / forgotten brand and what it stands for -- show TLB is “open for business” via presence in media, conferences, etc. Audit/revamp materials for consistent brand image; focus on needs over features.
17	**International accessibility**	Create international accessibility of TLB products across branches. This includes Master Trust and International Agreement. Enable customers transact remotely without the need to set up a separate entity and access solutions from other markets easily. Open accessibility to products from one branch to the other (i.e. HK customers into Singapore).

I	Scenario I	Explanation
3	**Master of HNW**	Increase thought leadership for succession planning, develop a ‘Masters of High Net Worth’ proposition with differentiated service and support, as well as recognition broker engagement programme
8	**Broker segmentation**	Design HNW broker segmentation & tiered service model (differentiated service levels/workflow & resource alignment by segment)
9	**Global broker reach**	Extend global broker reach (Asia, DIFC, Miami, Switzerland), but no in-market presence.
10	**Group partnership existing brokers**	Pilot exclusive broker referral model in Spain (leverage existing tier-1 broker relationship; reduced comm with VNB share to the bank partner)
18	**Customer journeys**	Redesign and optimize customer (and broker) journeys, considering local differences (not one-size-fits-all model).
19	**Customer & broker insight**	Increase customer and broker insight. Create a single interface for the customer service to have a 360-degree view of the customer without having to resort to multiple interfaces. This requires one single truth of customer data in all channels.

EXPLANATION OF CHANGE INITIATIVES

These have not yet been prioritized!

II	Scenario II (I+)	Explanation
1	**Affluent+ segment**	Differentiated FA model (and different pricing / service model, or even different label) for the affluent+ market.
11	**DIFC hub**	Extend global broker reach including via DIFC hub. Establish DIFC sales office under Category 4 DFSA license.
12	**FA proposition Singapore**	Ring-fence and differentiate in the Singapore FA channel with distinctive service / pricing models.
13	**Group partnership new distributor models**	Consider Group partnership options for Brazil (potential to anchor a new Latam master agency with one of the regional offshore networks; expanding the market in Brazil and providing access to broader Latam).

III	Scenario III (I+II+)	Explanation
4	**Launch WOL solution**	Expanded product offer, with competitive WOL launch in HK and Bermuda. Target pricing, features and communication. Product development/pricing, quote/illustration, ancillary HK functions (IM, monitoring setup) and basis changes required (US reporting)
5	**UL Remediation**	Design a go-forward solution for HK UL policyholders (either remediate the current product/return profile or migration path to new product. Mid-term path to resolve bank and broker objections to TLB as a go forward provider (in HK and other global hubs).
14	**FA proposition DIFC**	Ring-fence and differentiate in the DIFC FA channel with distinctive service / pricing models.

?	Question marks	Explanation
6	**PPLI / VUL?**	Do we expand into PPLI / VUL through acquisition? Writing these products requires a specialized infrastructure and skillset that TLB does not have currently. PPLI business also has a different risk profile that we would need to explore further. Targeted acquisition would be the most convenient way to acquire these highly specialized skills.
7	**New products / services?**	Develop strategy for new products and services (critical illness, white label international medical, …).
15	**Banca / agent model?**	Explore acquisition of a broker or tie-up with bank in exchange for an equity stake (captive model)?

PROCESSES & ORGANIZATION

1. Guiding principles
2. View on business processes
3. View on organization & capabilities
4. Change initiatives

GUIDING PRINCIPLES

1. **Standardization and automation.** Processes are standardized and automated where it adds value (i.e. chatbots, machine learning, AI, OCR), considered based on costs (total cost of ownership), benefits & risks.
2. **Decoupling front and back side**. The front side (distribution & customer engagement) is decoupled from the back side (product management & administration). Clear agreements about mutual requirements and service levels are made between front and back side.
   - The front side is customer and partner driven and focused on a brilliant customer experience. The front has accessible, complete and up-to-date data about customers, partners and customer cases. There is a clear process responsibility, control on customer processes & integral case handling.
   - The back side is efficient and focused on creating more scale, cost reduction, zero defects and process response / short waiting time. Input controls early in the process chain, deviations are organized into separate (sub)processes (but connected).
3. **Innovation & product / market development.** The development of new value propositions is focused on speed / time-to-market, agility and innovative power. We organize cross-functional taskforces to oversee the coordinated implementation of new products and product- & process improvements. We avoid a classical split between operations and IT.
4. **Agile way of working.** Business change is organized in multidisciplinary and autonomous value teams, focused on creating customer value, in short iterations. Teams are self-organizing, with a fixed budget and work in sprints according to a fixed rhythm. We set up 'horizontals' for value team alignment, for example, regarding architecture, security, and compliance.
5. **Sourcing.** We attract top talent from the market, especially operations, data and tech. We have key roles, such as product owner and business / IT architect, in-house. We provide appropriate training, support and skills, to retain and create talents.
6. **Transformation management.** We are transparent in choices and priorities and focus on results to realize our business transformation. We use an enterprise architecture process (BTP) to manage changes based on content, and change portfolio management to manage progress (time, money, capacity).

VIEW ON BUSINESS PROCESSES

Generic processes

- Strategy, overall management & reporting
- Product & market development
- Directing Asset Management
- Directing reinsurance

Distribution support

EXPLANATION OF CHANGE INITIATIVES

These have not yet been prioritized!

TRANSAMERICA LIFE BERMUDA LTD

0	Basic issues	Explanation
1	**Branding campaign**	Launch tactical brand campaign to boost awareness and consideration. Host events to introduce new products/trends and build deeper ties, participate in brokers' bank meetings to further push the brand, tailored offerings.
2	**Shorten time-to-market**	Shorten time-to-market of new products and adjustments.
3	**Performance control**	Improve performance control & reporting
4	**Data foundation**	Improve data management processes and data governance / data policies, develop data analytics and science to apply on marketing, sales, underwriting, servicing etc.
5	**Assess split FO – BO**	Assess whether the split between front office (→ enhance broker experience) and back office (→ efficiency) has been consistently implemented in all TLB hubs.

I	Scenario I	Explanation
5	**Quotation & application**	Optimize quotation and application process. Streamlining the process, not having to re-enter data and with more pre-filled fields.
6	**Data collection**	Replace unstructured email traffic by structured forms, digitize data collection, redesign current forms & apply AI / OCR.
7	**Premium collection**	Optimize premium collection processes, e.g. matching payments to customers and contracts.
8	**Customer & broker service**	Enhance broker and customer service processes (case management, shorten lead-time, first time right …).
12	**Global sales & marketing**	Build-out TLB HNW global sales function (geographic & key account coverage; aligned to competitors & growth ambitions). Dedicated marketing resource & budget supporting TLB engagement & events as well as third-party sponsorship/marketing activity
13	**Broker service team**	Stand up dedicated broker service team under global sales (providing end-to-end case management for Tier-1 and Tier-2 brokers)
14	**Customer fulfilment build-out**	Lift UW/CMO resourcing to next-3 levels to anchor support from reinsurer(s) as well as broker partners. Uplift new business resourcing ahead of volume uplift. Lift nationality acceptance (ultimately aim to align to top-2). Transition to multi-hub.
15	**Distribution support Group partnerships**	Acquire capabilities for developing and managing Group partnerships existing brokers.

EXPLANATION OF CHANGE INITIATIVES

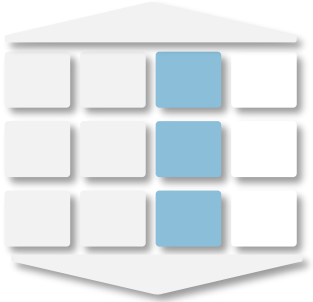
These have not yet been prioritized!

II	Scenario II (I+)	Explanation
9	**Process redesign**	Fundamental redesign of customer journey processes instead of short-term fixes. Increase scalability through standardization and increase the degree of automation of processes / reduce manual work.
16	**FA sales & service**	Organize dedicated sales and streamlined service for FA proposition. Transition to dedicated FA-facing sales & marketing and streamlined service.
17	**DIFC hub**	Organize new Dubai hub incl. sales / service capabilities. Establish DIFC sales office under Category 4 license. In-market resourcing (target 4 – 5 across sales & service) with scope to support Switzerland brokers.
18	**Distribution support Group partnerships**	Acquire capabilities for developing and managing Group partnerships new channels.

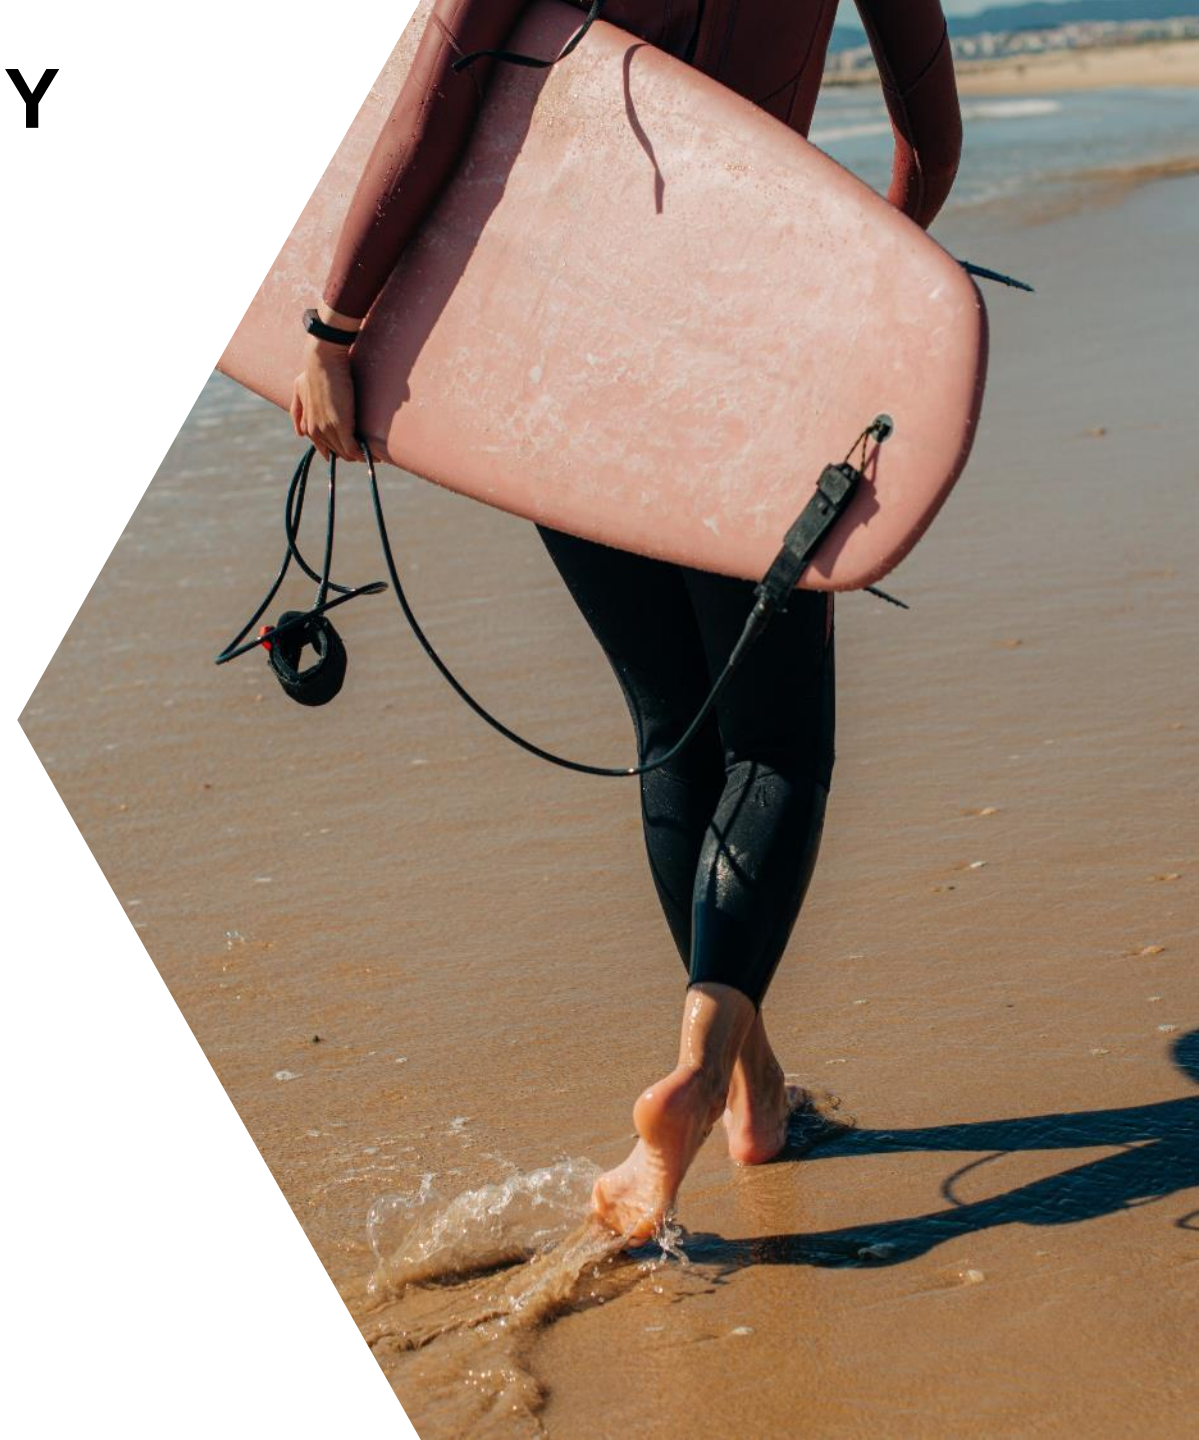
III	Scenario III (I+II+)	Explanation
19	**WOL competences**	Build WOL capacity & knowledge for product development / pricing / build (e.g. quote / illustration) and then ancillary functions (IM, monitoring).

?	Question marks	Explanation
20	**VUL / PPLI competences**	Acquire VUL / PPLI capacity & knowledge depending on strategic choice?
10	**Partnerships health?**	Build and manage partnerships for health services & CI?
21	**Sourcing strategy**	Define sourcing strategy, i.e. IT-services.
22	**Agency / banca support?**	Acquire competences for agency / banca support?

APPLICATIONS & TECHNOLOGY



1. Guiding principles
2. View on information needs
3. Plot of current applications
4. Change initiatives



GUIDING PRINCIPLES

1. **Flexibility:** Our application architecture is flexible to deal with dynamic and changing environments. No redundant IT solutions for the same information need. New solutions are quickly shared or absorbed within our ecosystem. Modularity: decoupled, autonomous services, based on integration (APIs). .

2. **IT-platform as-a-service:** the IT landscape is offered to the business and partners as a technology platform with IT services. The platform is cyber-secure, scalable & connectable with (external) parties. We use cloud-native resources whenever it is feasible, to simplify implementing scalability, high availability and provide cost-effective infrastructure management.

3. **Standards:** We make use of solution standards were applicable and are aligned with the best practices and principles of Group. Buy before build wherever possible regarding new IT applications. Re-use where possible. Limit custom modifications and leverage existing software as much as possible.

4. **Ease of use:** Applications are designed and developed with the user in mind, with a consistent user interface and omnichannel experience, regardless of the device, service or system. Information is always easily accessible to authorized users (24x7). We offer portals for customer groups, distribution partners and TLB employees.

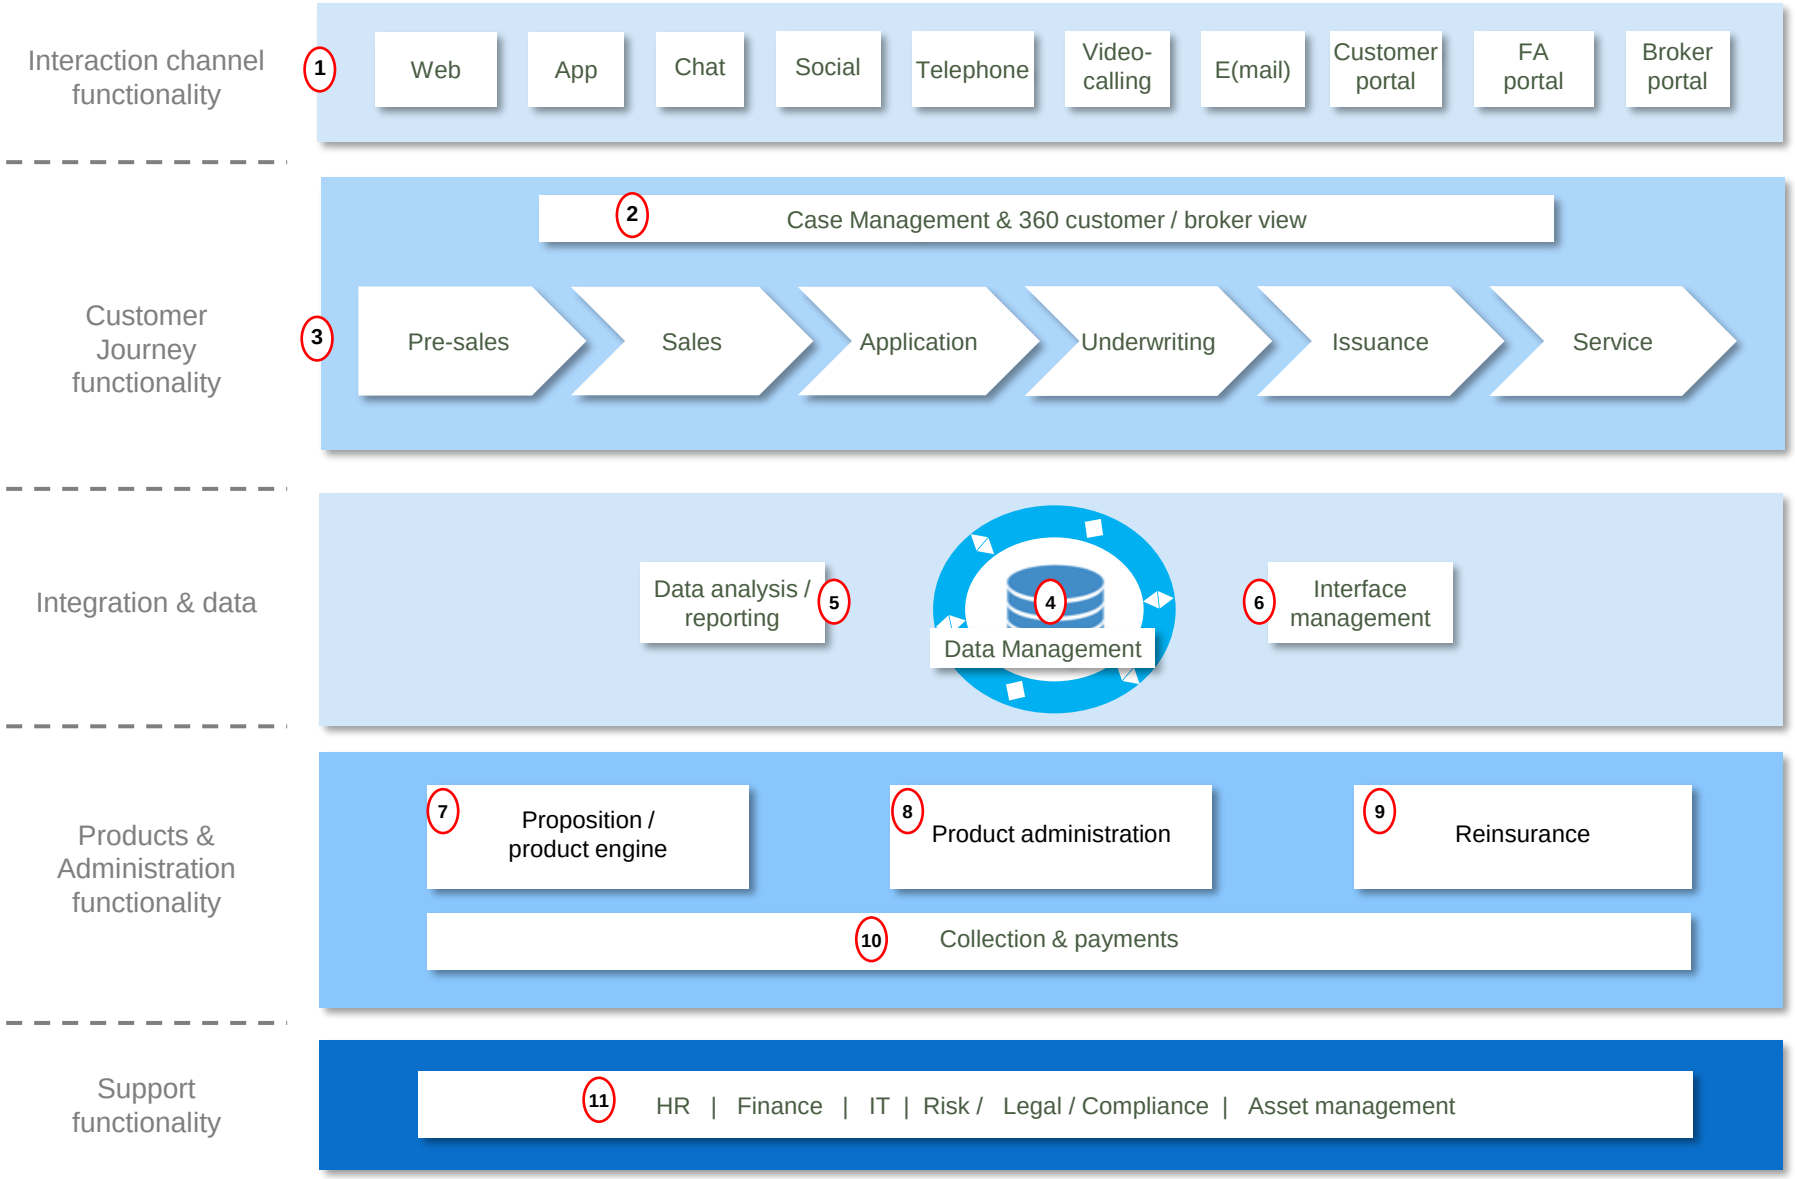
5. **Data management & ethics:** Data quality, lifecycle, access and privacy are in order, customers can trust that their data is protected. Data access is auditable and protected, using data governance and common data definitions to improve information reliability. Relationships are uniquely identified. The authentic source of all data is known. We create a data environment where (un)structured data is stored, managed, analyzed, used and protected. Transactional operations are separated from analytical purposes.

6. **Data is an asset:** Data generates a continuous stream of insights and is input for predictions, scenario analysis, automated decisions and digital innovations. We use data analytics across the value chain (distribution, underwriting, claims, servicing etc.).

7. **Innovation:** leverage innovation focused on business needs, using technology to achieve product excellence and high speed to operate new services. Successful innovations are incorporated into the overall architecture.

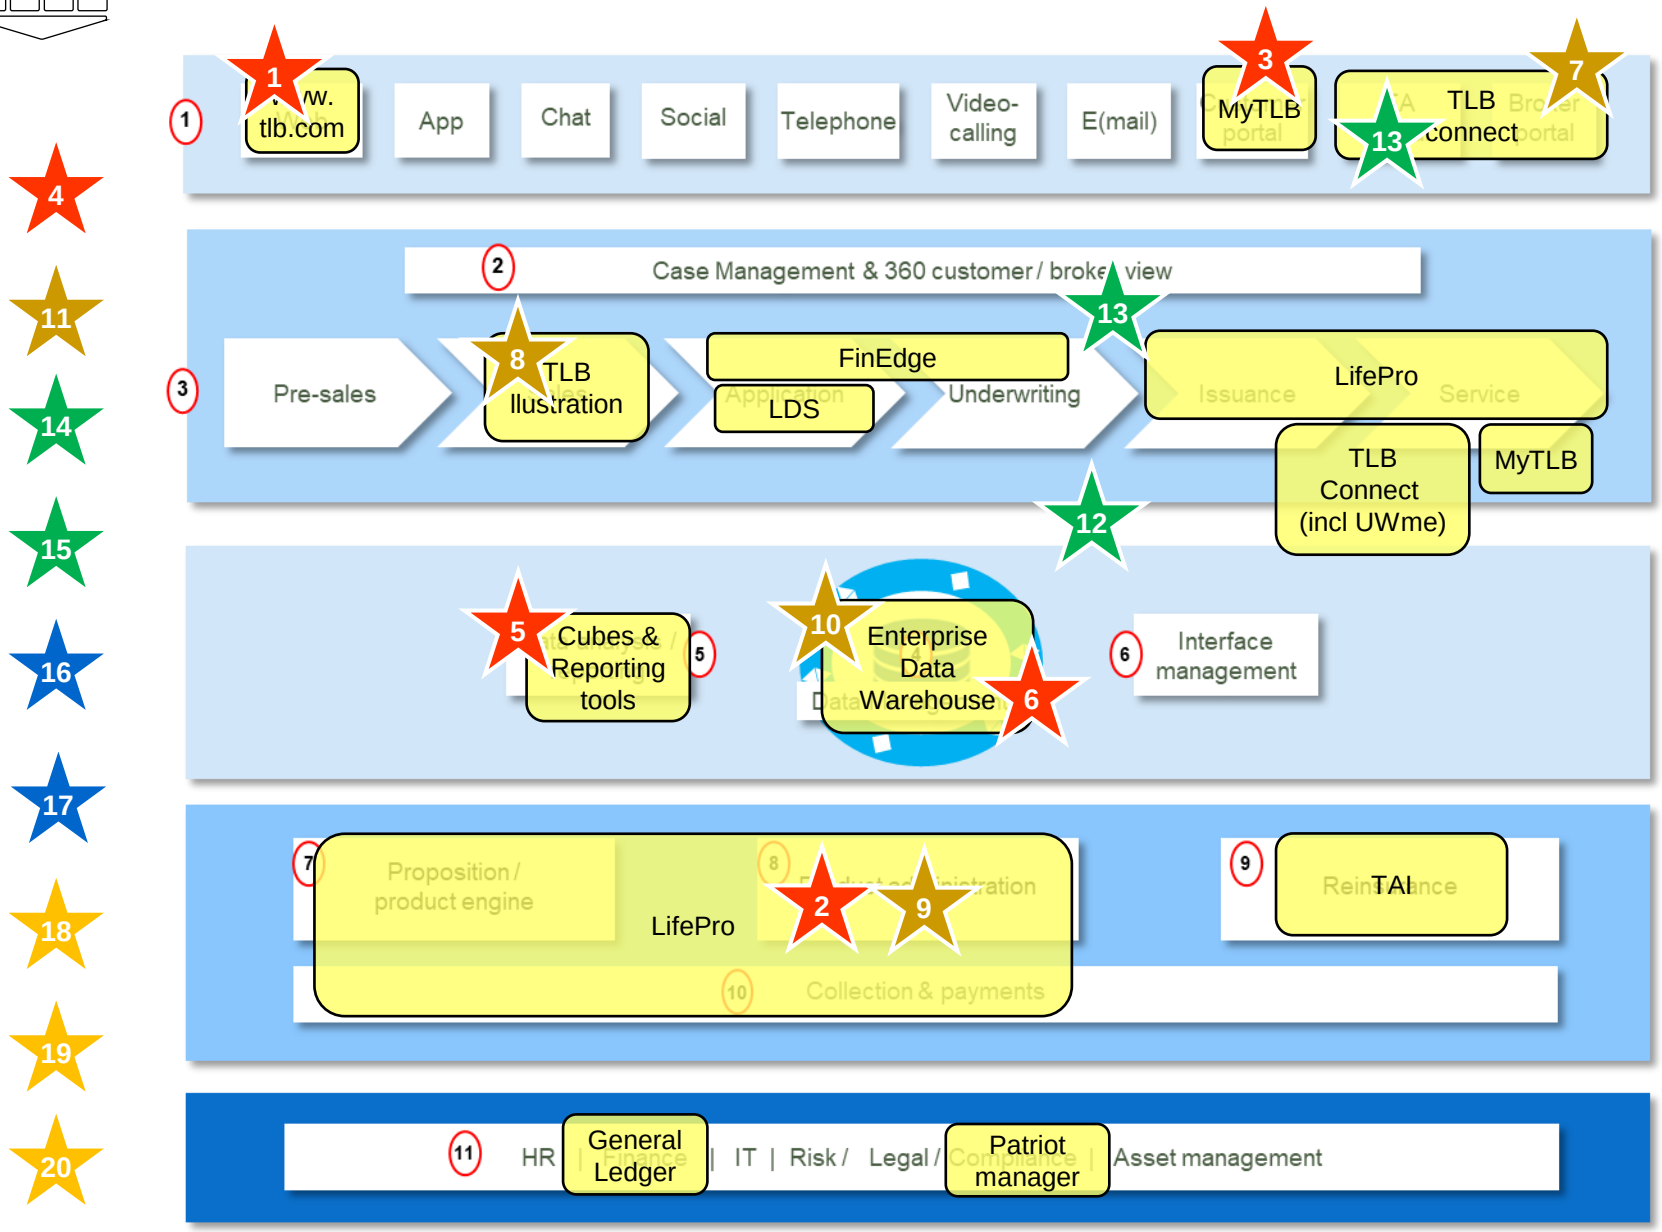
VIEW ON INFORMATION NEEDS

The logical building blocks of the information landscape



1. All interaction channels for customers, distribution partners and employees
2. Define workflow, assign tasks, calendar management, monitor actions, status inf, 360 customer / partner view
3. All kind of functions, to support the customer journey:
   - Illustrations
   - Quotation, compiling customer offerings
   - Onboarding
   - Handling requests for services (claims, benefits) to be provided
   - Contact registration, FAQ, customer reactions, complaints
4. Big data management of structured data and unstructured data (i.e. documents)
5. Analysis/science, reporting for management and regulators
6. Facilitating incoming and outgoing data flows
7. Compiling, building and managing propositions / pricing
8. Contract management insurance products, mutations, calculation of premiums and benefits, claims handling
9. Reinsurance functionality
10. Premium collection, accounts receivable / accounts payable management, bank processing
11. Functionality support functions

PLOT OF CURRENT APPLICATIONS



Basic issues

1. TLB Corporate Site rebranding
2. LifePro Upgrade to V20
3. Redesign customer portal / app
4. Solve potential latency problem
5. Management dashboard
6. Develop a Data Ecosystem

Scenario I

7. Uplift HNW broker portal: (TLB Connect)
8. Enhance quote / illustration flexibility
9. Improvement functionality of LifePro (payments, address change etc.)
10. Leverage AI to read & digitize documents
11. Enable Group partnerships (AI Spain. MAG etc.)

Scenario II

12. Front / mid office tech simplification
13. Case management & 360 customer / broker view
14. Enable differentiated FA model
15. Enable DIFC hub

Scenario III

16. Launch WOL
17. Enable UL Remediation

Question marks

18. Enable PPLI / VUL
19. Enable new products / services
20. Enable Banca / agent model

EXPLANATION OF CHANGE INITIATIVES

These have not yet been prioritized!

0	Basic issues	Explanation
1	**TLB Site rebranding**	Implement changes in branding in corporate website, portals, social media and electronic messaging. Better reflecting TLB back on the HNW market and refreshing Company image.
2	**Upgrade LifePro**	LifePRO Upgrade to V20. Optimized end user experience (360 view in web), Deployment Flexibility, Product Launch Evolution including modifications Terminal Illness Rider and Floor Buffer, Table Normalization, etc.
3	**Customer portal / app**	Redesign customer portal / app. This is currently underused and not highly valued by customers. myTLB UI improvement and visualization. Modernize the UI to keep competitive edge compared to other HNW competitors. More communication in the form of visual (charts/graphs). Develop online tools (i.e. comparison tools) for policyholders.
4	**Potential latency problem**	It is necessary to investigate what the cause of this is and what alternatives are available to solve it.
5	**Management dashboard**	Develop a performance dashboard / strategic monitor model for operational control and efficiency. Improve management information to stakeholders / supervisors.
6	**Data Ecosystem**	Develop a Data Ecosystem with self-service possibilities. For example, for customer and broker analysis and segmentation and for performance management.

I	Scenario I	Explanation
7	**HNW broker portal (TLB Connect)**	Adjust or renew TLB Connect: UI improvement and visualization, submission portal integration & AI OCR, usage of GenAI. Provide intuitive guidance to Brokers to reduce enquiries. Increase Broker Usage for IFIS. Audit digital interfaces and prioritize enhancements based on brokers' feedback.. Support lead generation & broker sales process. Make it available in a mobile app?
8	**Illustration system**	Enhance quote / illustration flexibility incl integration to broker tools. Disconnect from broker portal. Adjust the User Interface (UI) for Broker ease of use and to ensure that this platform is seen as intuitive when compared to other HNW competitors.
9	**Improvements LifePro**	Improvement functionality of LifePro (premium collection, address change etc.)
10	**Digitize documents**	Leverage AI to read & digitize all kind of unstructured documents we receive from brokers and customers.
11	**Enable Group partnerships**	Enable relationship management Group partnerships; pilot exclusive broker referral model in Spain.

EXPLANATION OF CHANGE INITIATIVES

These have not yet been prioritized!

II	Scenario II	Explanation
12	**Front / midoffice tech redesign**	Redesign and build sales / data collection / application / onboarding process and functionality. Optimize quotation and application functionality. Apply forms for easy completion with pre-populated fields; digitize data collection, redesign current forms & apply AI / OCR - to read and digitize documents – medical reports, financial statement, emails , implement document repository alternative to email submissions.
1	**Case management / CRM**	Develop case / workflow management for handling broker cases. Develop an integrated customer view with all relevant information.
13	**Enable differentiated FA model**	Enable a differentiated proposition with distinctive service / pricing models and label for the FA / Affluent+ market in the various applications. Dedicated sales, streamlined service (e-app/URE) / separated portal and differentiated pricing/terms
14	**Enable DIFC hub**	Ensure the necessary IT tools in a new DIFC hub / to be further investigated

III	Scenario III	Explanation
16	**Launch WOL**	Launch WOL administration and front office. WOL functionality is already built and exist, just never launched / to be further investigated
17	**Enable UL Remediation**	Enable UL Remediation / migration for HK UL customers / / to be further investigated

?	Question marks	Explanation
18	**Enable PPLI / VUL**	Enable PPLI / VUL administration and front office / to be further investigated?
19	**Enable new products / services**	Enable new products / services (critical illness, white label international medical, …) / to be further investigated?
20	**Enable Banca / agent model**	Enable Banca / agent model / to be further investigated?

PEOPLE & CULTURE

1. Guiding principles
2. Our Goal: engaged & empowered employees
3. Our way of working
4. Functional gaps
5. Change initiatives

GUIDING PRINCIPLES

1. **Performance Management:** Clearly defined goals (clear, accountable, executed). Recognize performance, objectively addressing and supporting development. Embed BLL values & purpose via performance management and career conversations.

2. **Talent Management:** Ensures succession planning / pipelines for key roles as part of Leadership's strategic people goals. Promote career conversations between managers and employees (evolve), and leverage TMP and We Learn. Focus on executing TOM and building capabilities for future state.

3. **Leadership / Talent development:** Target development programs in parallel with E-learning / managers' training. Training calendar leadership soft skills training, technical training / support employees' development goals. Rising Star Program for tomorrow's' leaders.

4. **Talent acquisition:** Align talent capabilities to support business strategy and change projects, right people in the right place at the right time. Work with stakeholders to retain and transfer institutional knowledge, cross teams training, identify contingency roles and build agile teams.

5. **Continuous Listening Strategy:** Engagement, pulse survey. Manage communication, implement action planning to address priorities identified. Promote inclusion and diversity, male allies, women's network.

6. **HR Operations / Shared Services:** Continue with automation to improve employee's experience. Revamp onboarding, orientation, induction. Continue to review benefits and policies to remain competitive, job grading, market benchmark.

OUR GOAL: ENGAGED AND EMPOWERED EMPLOYEES

How we build a culture of engaged workforce, breakthrough unconscious bias, attract and retain talent in a competitive market:

- To be truly BLL, Tune in, Step up and Force for Good
- To be a talent builder / robust succession planning
- To be preferred employer with engaged and empowered employees.
- To create a culture of diversity and inclusion, psychological safe for employees to be authentic self

1

We have a clear and well-defined position as an employer of choice, with engaged and dedicated employees

To become a preferred employer

To become a talent builder

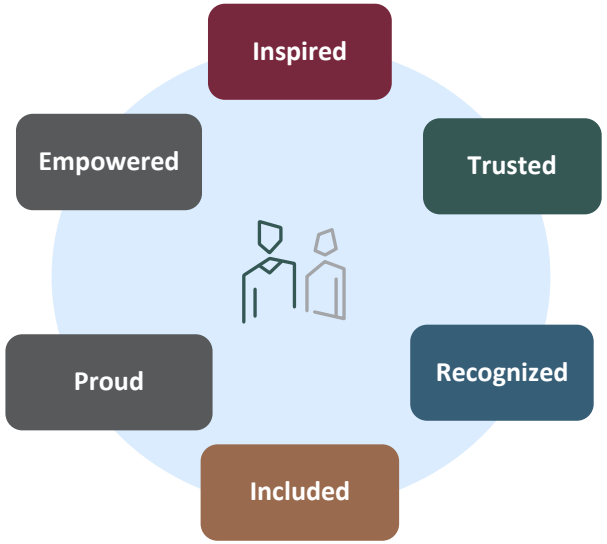
- ✓ We recruit talented people early in their careers, aim to staff key positions largely from within our organization.
- ✓ We ensures employees can learn and develop and are recognized for their skill and expertise

- ✓ We ensure our employees are accountable for their performance.
- ✓ We reward high performers, address underperformance and make sure we give our employees regular feedback

To become a top performer

We want our employees to feel…….

2



- **Inspired** by our vision, to make a sustainable difference at work and in society
- **Trusted and valued** for contributing their ideas & diversity of thought
- **Recognized** for results, dedication and their contribution to TLB
- **Included** and able to be their authentic self at TLB
- **Proud** to be part of TLB (Market Position & Brand)
- **Empowered,** challenged and supported to innovate, transform and grow

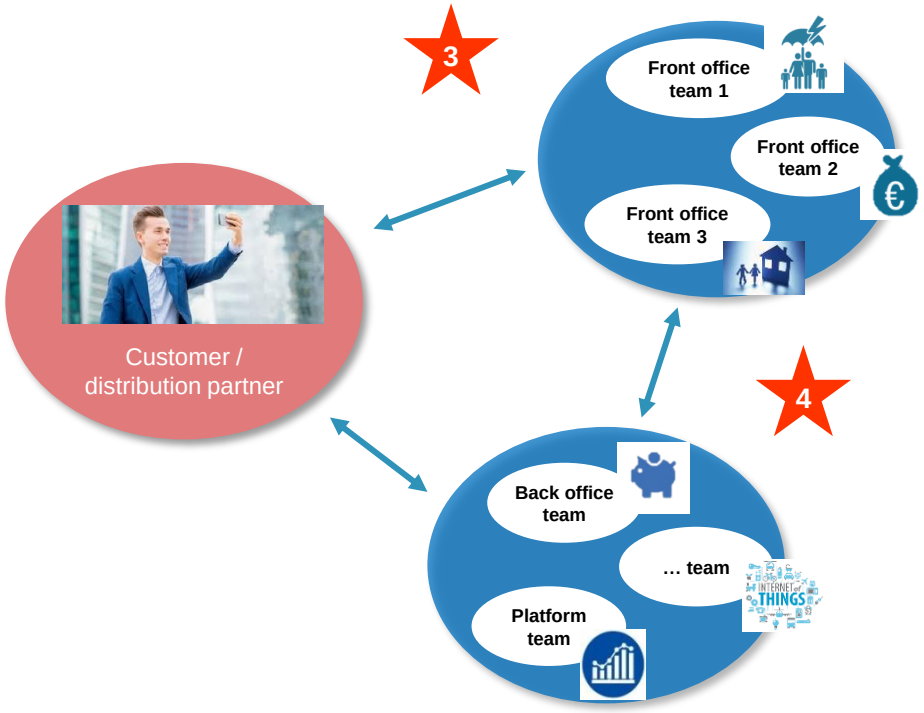
0

Basic issues

1. Continue to develop being an attractive employer
2. Further shape leadership

OUR WAY OF WORKING: MULTIDISCIPLINARY AND FOCUSED ON VALUE CREATION

- Focused on **creating business value**. Define these values concretely and measurably, assign them to an owner and invest value creation in a team.
- The teams are **multidisciplinary** with the participation of all stakeholders. The team is shielded from its environment as much as possible, is responsible for the result and therefore for the planning, the division of work and the monitoring of progress.
- The teams have **maximum autonomy** within common agreements, for example about branding, services (tone-of-voice, opening hours, ...), marketing / PR, IT architecture, investments / change calendar and HR / W&S.
- **Agile way-of-working** is based on trust, on open lines of communication with the customer; on a management style that is facilitating and that is not necessarily directing. It is a model in which decisions are not delegated upwards to people with the stripes on their shoulders, but where knowledge holders are mandated from their expertise.



Basic issues

0

3. Implement agile way of working
4. Develop digital savviness

FUNCTIONAL GAPS

LEGEND	
No Gap	
Some Gap	
Large Gap	
Not Applicable	

Function	Competence Map		Function	Competence Rating	
Human Resources	Well defined structure, overseeing operations and shared services for Asia, expanded with C&B and T&D.	1, 2, 6, 7	**Product Development**	Evolving structure, need to build out analytical capabilities to support product development.	11, 12
Investment	Diverse capabilities covering Investment and ESG.	12	**Sales & Distribution**	S&D capabilities across TLB locations, operating with stressed resource. Challenges with product proposition on HK side. SGP and BM okay.	10, 8
Actuarial	Ongoing attritions driven by talent war. Talents accelerated and are develop in role with more experience. Pricing expertise and capacity for PPLI / WOL	12	**Information Technology / PMO**	Stable teams but going to new leadership. Future state needs to be defined. Data science/analysts' gap? Architecture for (new) technology	4, 5, 6
Risk	Stable capabilities, well defined structure.		**Marketing & Communication**	Stable team, new skills recruited for external branding and communication.	9, 10, 11
Finance	Relatively new team. Efforts required for streamlining, automation. Requires some talents with analytical skills		**IUC _ Issuance, Underwriting, Claims (covering SG, BM)**	Strong capabilities, well defined structure.	
Legal	Good level of capabilities across TLB, with relatively stable teams. Legal framework for DIFC Hub	10	**Customer Fulfilment**	Unstable capabilities with relatively high attritions. Efforts required for processing / ease of doing business. Servicing capabilities to support the various initiatives.	6, 8, 10, 12
Compliance	Good level of capabilities across TLB, with relatively stable teams. Compliance framework for DIFC Hub	10	**Reinsurance Management**	Stable and BAU.	

0

Basic issues

1. Continue to develop being an attractive employer
2. Further shape leadership

4. Develop digital savviness
5. Assess IT demand & supply management
6. Data / AI capabilities
7. Business change capabilities
8. Develop CX capabilities

Scenario's

9. Support resourcing, competences and skills of scenario I
10. Support resourcing, competences and skills of scenario II
11. Support resourcing, competences and skills of scenario III
12. Support resourcing, competences and skills of question marks

EXPLANATION OF CHANGE INITIATIVES

These have not yet been prioritized!

0	Basic issues	Explanation
1	**Attractive employer**	• Continue to develop as an attractive employer. Develop a proposition for employees: TLB is a great company to work for! • Increase employee involvement, experience and satisfaction.
2	**Further shape leadership**	• Develop an inspiring leadership style: visionary, innovative, outside-in perspective, trying / failing / learning, guiding, providing clarity in strategy and facilitating in executing it; sets the stage for champions • Focus on collaborative behavior at all levels. Giving employees space and confidence to use their expertise. Working from trust, and mistakes are a continuous part of the dialogue to learn from.
3	**Assess IT demand & supply management**	• Build roles and competences in developing and managing enterprise architecture / BTP, process management, requirements management, control of delivery, drawing up and managing change portfolio, control of transformation progress (time, money, capacity, risks). • Outsourcing activities that we are not good at and/or that add little value to TLB. Ensuring a grip on outsourcing and being able to proactively supervise outsourcing and monitor compliance with agreements.
4	**Digital savvyness**	Making employees digital savvy. Increase digital awareness in the organization: smart digital business processes, data-driven working, use of AI, etc. Create digital training curriculum around key general buckets of digitalization.
5	**Implement agile way of working**	• Implementing Agile / scrum as change approach where possible (for more complex issues). A Scrum (development) team always consists of a multidisciplinary representation. The roles of product owner and development team are further elaborated. • Definition of concrete business values; formulate change teams, focused on value creation. • Coaching on 'what', leaving room for 'how; teams are self-managing and responsible for the 'how'.
6	**Data / Architecture competences**	• Recruit and develop data science & analyst competences: generate valuable (including predictive) information from an immense amount of data (such as customer behavior, segmentation characteristics, search terms, product reviews, etc.). In addition, analysis for management information / performance dashboard. • Recruit and develop IT Architecture competences.
7	**Business change capabilities**	Recruit and develop business change management capabilities: change on the human side in working methods, behavior and skills, by involving users early and including them in change and implementation.
8	**CX capabilities**	Recruit and develop customer experience capabilities in all channels: point of contact and the first impression for customers and distribution partners, responsible for the service that customers and partners deserve.

EXPLANATION OF CHANGE INITIATIVES

These have not yet been prioritized!

I	Scenario I	Explanation
9	**Support resourcing, competences and skills of scenario I**	Deriving personnel and social consequences of scenario I choices: customer journey and process optimization, build-out Global sales & marketing, ramp-up front-office HK / SG, developing Group partnerships existing brokers.

II	Scenario II	Explanation
10	**Support resourcing, competences and skills of scenario II**	Deriving personnel and social consequences of scenario II choices: push differentiated FA model, launch DIFC hub (eg legal and compliance framework for DIFC hub), developing Group partnerships new channels.

III	Scenario III	Explanation
11	**Support resourcing, competences and skills of scenario III**	Deriving personnel and social consequences of scenario II choices: build WOL capabilities (eg pricing expertise and capacity), UL remediation

?	Question marks	Explanation
12	**Support resourcing, competences and skills of question marks**	Deriving personnel and social consequences of question marks: build VUL / PPLI capabilities (eg pricing expertise and capacity)? People and competences for agency / banca support? People and competences for new products & services (health services & CI)? Sourcing strategy IT?

CHANGE PORTFOLIO

PROPOSED

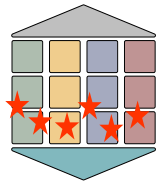
1. Overview change initiatives
2. Clustering to change buckets
3. Priorities
4. Transformation organization
5. Key success factors

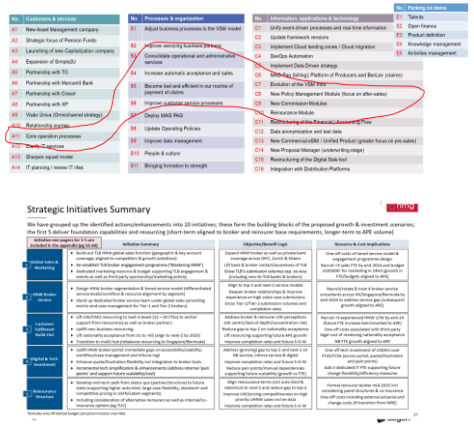
OVERVIEW OF ALL CHANGE INITIATIVES

TRANSAMERICA LIFE BERMUDA LTD

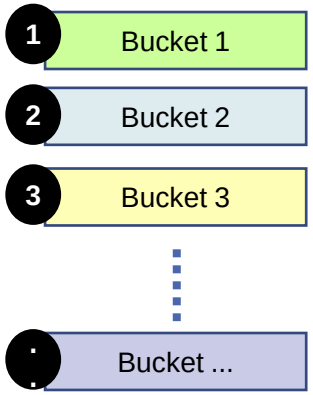
	Customers & services	Processes & organization	Applications & technology	People & culture
0	▪ Benchmark and adjust pricing ▪ Improve brand and presence ▪ Create international accessibility (Master Trust and International Agreement)	▪ Launch tactical brand campaign ▪ Shorten time-to-market ▪ Improve performance control & reporting ▪ Improve data mgt & governance ▪ Assess split FO – BO	▪ TLB Corporate Site rebranding ▪ LifePro Upgrade to V20 ▪ Redesign customer portal / app ▪ Solve potential latency problem ▪ Management dashboard ▪ Develop a Data Ecosystem	▪ Continue to develop as an attractive employer ▪ Further shape leadership ▪ Implement agile way of working ▪ Develop digital savviness ▪ Assess IT demand & supply mgt ▪ Data / Architecture competences ▪ Business change capabilities ▪ Build CX skills & competences
I	▪ Develop Master of HNW ▪ Broker segmentation ▪ Extend global broker reach, no in-market presence ▪ Group partnerships (Spain) ▪ Design customer journeys ▪ Improve customer & broker insight	▪ Optimize quotation & application process ▪ Improve data collection ▪ Optimize premium collection processes ▪ Enhance customer and broker service ▪ Build-out global sales function ▪ Stand-up dedicated broker service team ▪ Customer fulfilment build-out ▪ Group partnerships existing brokers	▪ Uplift HNW broker portal:(TLB Connect) ▪ Enhance quote / illustration flexibility ▪ Improvement functionality of LifePro (payments, address change etc.) ▪ Leverage AI to read & digitize documents ▪ Enable Group partnerships	▪ Support resourcing, competences and skills of scenario I
II	▪ Differentiate affluent+ segment ▪ Differentiated FA proposition Sing ▪ Extend broker reach DIFC hub ▪ Group partnerships via new channel (eg Brazil)	▪ Redesign of customer journey processes ▪ Sales and service for FA proposition ▪ Organize new DIFC hub ▪ Group partnerships new channels	▪ Front / mid office tech simplification ▪ Case management & 360 customer / broker view ▪ Develop separate FA portal ▪ Enable DIFC hub	▪ Support resourcing, competences and skills of scenario II
III	▪ WOL launch in HK and Bermuda ▪ HK UL remediation ▪ Differentiated FA proposition DIFC	▪ Build WOL capabilities	▪ Launch WOL / build reporting ▪ Enable UL Remediation	▪ Support resourcing, competences and skills of scenario III
?	▪ PPLI / VUL in portfolio? ▪ New products / services? ▪ Develop Banca / agent model?	▪ Partnerships for health services & CI? ▪ Acquire VUL / PPLI capabilities? ▪ Define sourcing strategy, i.e. IT-services ▪ Capabilities for agency / banca support?	▪ Enable PPLI / VUL ? ▪ Enable new products / services? ▪ Enable Banca / agent model?	▪ Support resourcing, competences and skills of question marks

HOW TO DERIVE THE CHANGE PORTFOLIO?

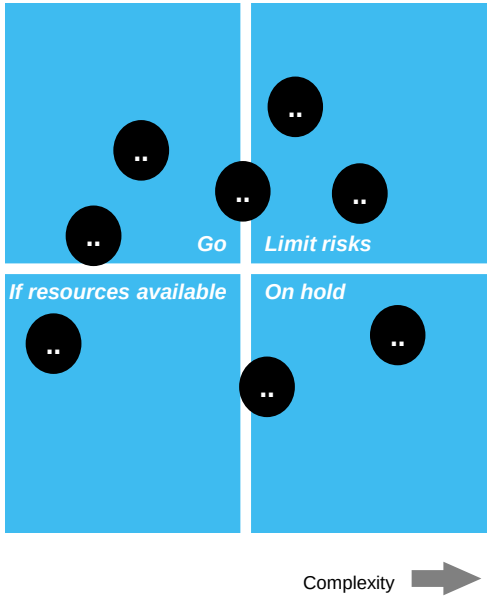




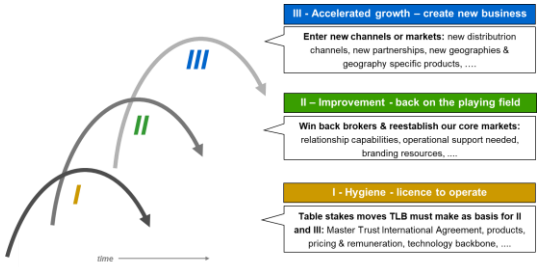
In the previous chapters, the desired change initiatives have been determined for each column



The desired change initiatives are clustered to buckets, based on substantive coherence, similarity of goals, same business owner



The buckets are (very draft) ranked based on consideration of business value versus complexity; this can also be done at a more detailed level per change bucket



Based on the priorities, interdependencies and available resources, a roadmap can be derived

PRIORITY SETTING: BUSINESS VALUE VERSUS COMPLEXITY

Business value

- Growth
- Profitability
- Customer / partner satisfaction
- Social value
- Comply with legal requirements
- …

Relatively score:

- very high
- high
- low
- very low

Complexity

- Size (capacity, lead-time)
- Clarity of goals & scope
- Capital expenditure
- Political influences
- Available knowledge / resources
- Use of new technologies,
- Maturity of organization
- ….

Relatively score

- very low
- low
- high
- very high

Based on the "scores" of the change initiatives on these two dimensions, priorities can be set:

- Relatively high value, low complexity: implement immediately; no discussion.
- Relatively high value, high complexity: reduce risk first, for example by splitting up the initiative and re-scoring the parts on the dimensions. Or by taking an incremental approach to the initiative and experimenting.
- Relatively low value, high complexity: don't do it, discard.
- Relatively low value, low complexity (mostly “low hanging fruit”): implement if resources, time and capacity are available.

This exercise is done to rank the change buckets among each other but can then also be used to set priorities within the change bucket.

TIME AND BUDGET PLANNING

Bucket	Value stream	Budget	2024		2025				2026				2027			
			Q3	Q4	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4
Global market presences	Brand & presence	HK$0,00

	Backoffice op															
	IT backbone															
Data-driven working	Data manage															
	Data analytics															
Agile & inspiring culture	Business change															
	IT management	HK$0,00														
	People & culture	HK$0,00														
	HR support scenario's	HK$0,00														

work in progress

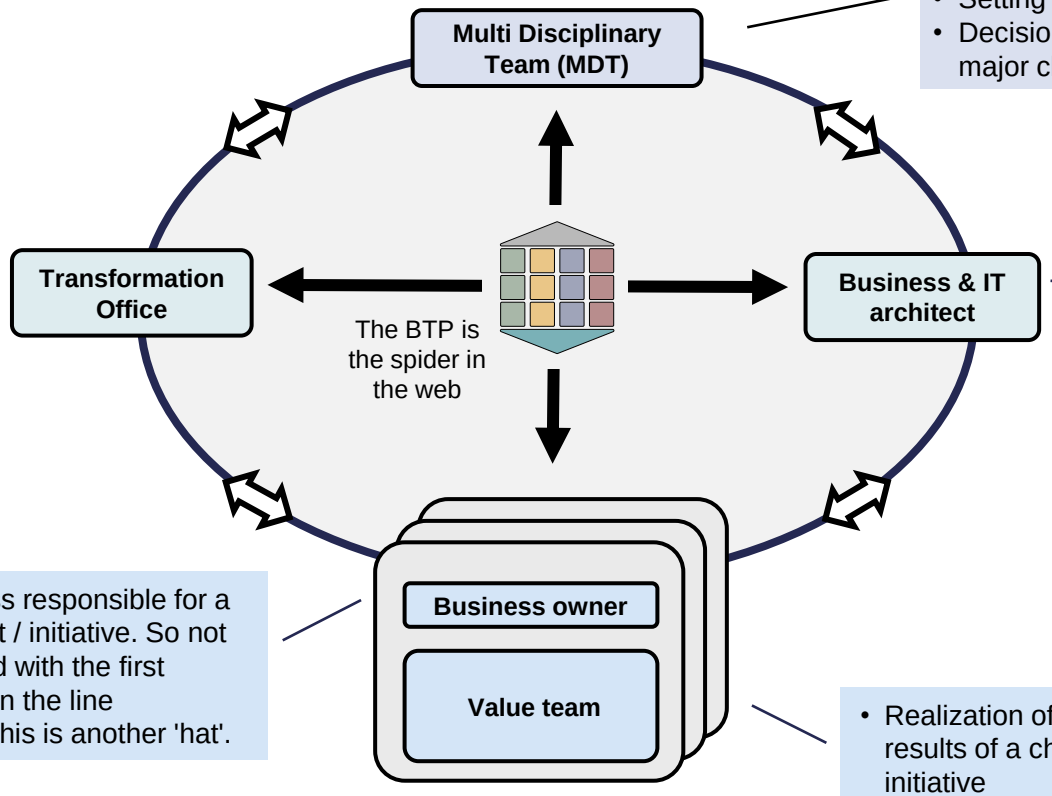
Next steps (4-6 wks.) :

- Regroup all initiatives into overall program
- Define concrete deliverables, business cases/outcome
- Determine dependencies, cost and resource impact
- Prepare execution, teams, communication
- Set up Program management structure and support
- Set up reporting structure

TRANSFORMATION ORGANIZATION – ROLES TO ORGANIZE

- Monitoring the overall change portfolio (time, resources, money)
- Monitoring realization versus plans
- Advising MDT in decision-making
- Coaching those involved in change
- Making rules and instruments available regarding change management

- Owner of the BTP
- Setting priorities
- Decision on new changes / major changes



- Setting up enterprise architecture
- Drafting project start architecture (PSA) for new change initiatives
- Formulating demand for IT and translation into solutions
- Advising MDT in decision-making
- Review change results, control on fit with enterprise architecture

- Cross business responsible for a change bucket / initiative. So not to be confused with the first responsibility in the line organization; this is another 'hat'.

- Realization of the defined results of a change bucket / initiative

KEY SUCCESS FACTORS FOR ACCELERATION CHANGE

People make the difference. It's all about culture and behavior change, starting with leadership. Lead the change and motivate via awesome experience, employee perspective, co-creation, commitment and phased step by step approach. Creating Awareness, Desire, Knowledge, Ability and Reinforcement are essential for success.

Clear ownership and mandate to create pull for change. Business management must disseminate the vision, connect and remove obstacles to speed in order to break down & prevent complexity.

Dare to make (tough) choices when needed. Stick to our decisions when made.

Holistic thinking, agreed priority & direction setting followed by self-organized delivery. Create speed by giving new initiatives space, freedom and autonomy. But changes are not isolated from each other. Monitor the realization of initiatives / enablers by overall change portfolio management with a calendar with milestones and dependencies, resource allocation and overall risk management

A good start is half the battle. Before the start of an initiative, the definition must be clear to everyone: the goals, results, scope, a first rough business case, organizational, technical and financial consequences. Work with short and sharp definition of goals and mission.

Work incrementally on business value as well as on our capabilities: learn by doing and achieve tangible results quickly, in small steps. Evaluate and improve continuously. If successful, implement the results more widely in the organization.

Change under architecture. In the physical world of building, 'built under architecture' means that the building was designed and supervised by a qualified architect. This is also necessary in business transformation; only then we will realize the sustainability and flexibility that gives an edge over the competition.

Adopt industry standards where possible. Do not hold long debates on what to use, when there is a clear standard in the market that we can use.
